Vehicle Transportation Axle

Pedestrian and Bicycle Axle

Green Area

Commercial-Sales Area

Analysis

I am thrilled to present an exciting project we have developed for one of Skopje's commercial axes. The aim of this project is to make the area more functional and environmentally friendly while preserving the existing structures. I believe that this project holds significant importance for Skopje and offers a solution to several challenges that may arise in the near future.

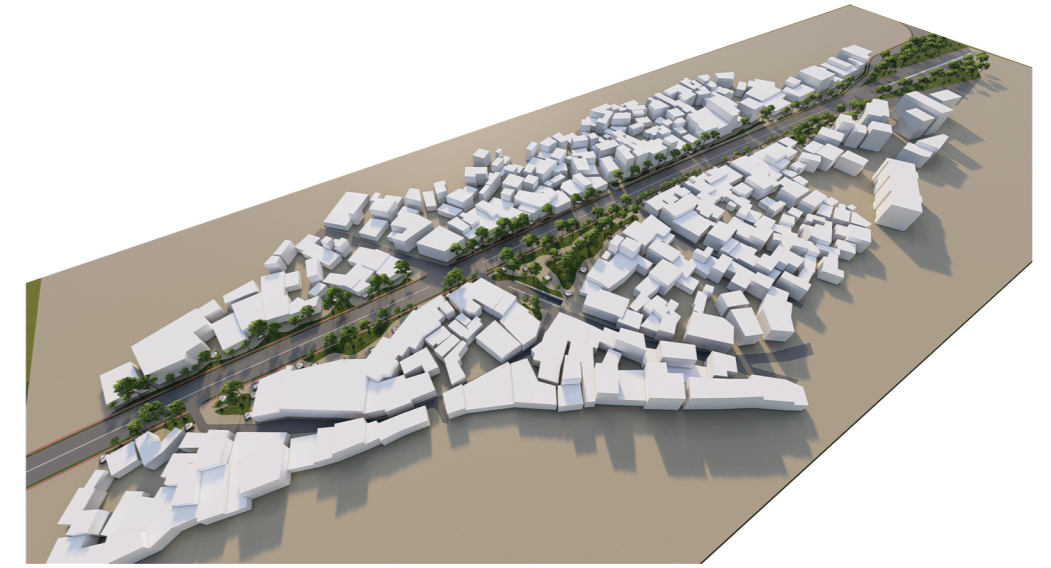

The project begins by introducing green spaces without any interference with the existing structures. These green areas are intended to provide a place where city residents and visitors can enjoy fresh air and reconnect with nature. Simultaneously, they will enhance the visual appeal of the commercial axis, encouraging visitors to stay longer.

Another crucial component of our project is the establishment of a dedicated bicycle lane. This promotes sustainable transportation and aims to reduce traffic issues while encouraging a healthier lifestyle. The two-way traffic system is designed to alleviate congestion in the city.

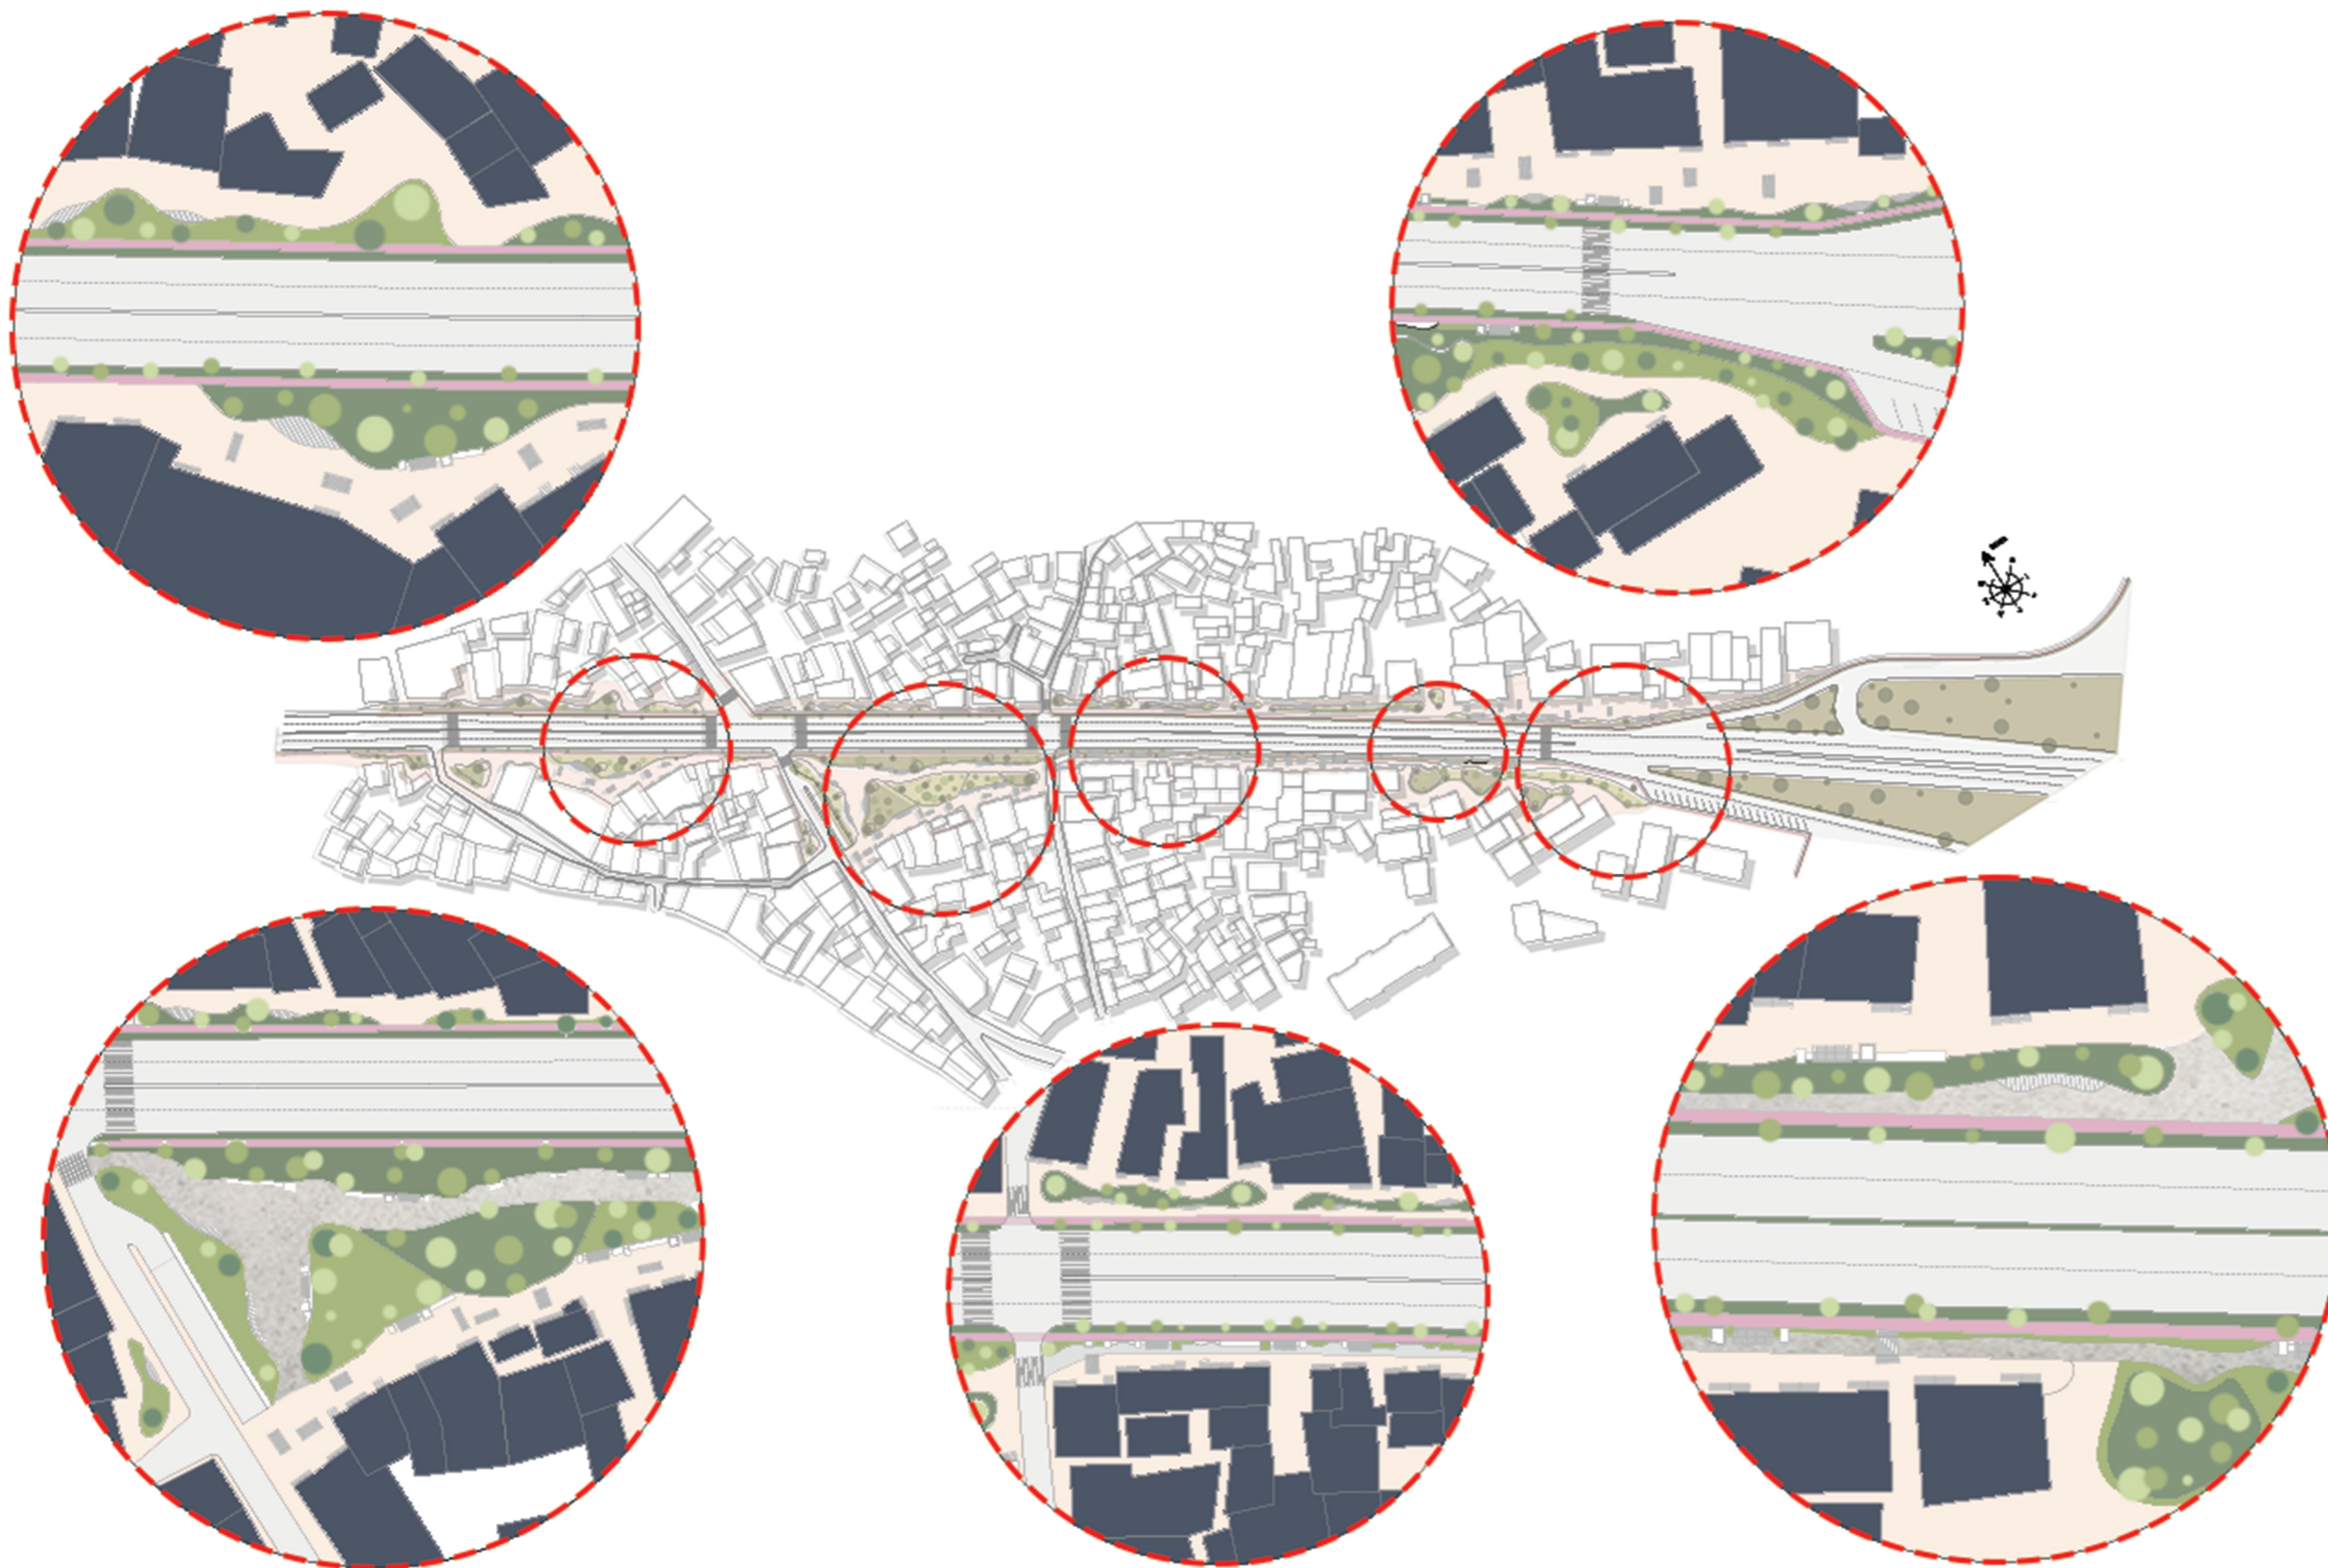

In addition to these changes, the project addresses the ongoing parking issues along the road. Our proposal includes new arrangements and the construction of underground multi-story parking facilities, transforming on-street parking areas into green spaces. This ensures a more organized and efficient traffic flow along the commercial axis while preserving green areas.

The reconfiguration of this commercial axis for Skopje promises to make it a more attractive destination for both residents and visitors. Our commitment to sustainability and green spaces reflects our environmental responsibility.

The approval of this project would significantly contribute to Skopje's progress towards a sustainable future. I am excited about the opportunity to collaborate with you and contribute to the success of this vital project.
